

Slimbox[®]

Perfectly fitted packaging

Measure, pack and send.

- Choose from a large number of boxes (including Fefco-standards) from the Slimbox app. Or create your own box by entering the dimensions.
- Experiment with your package design. Upload a personal drawing and cut it into whatever shape you want.
- Control the machine entirely with the Slimbox app. Your mobile device can connect over USB or wireless (even with no network available).

Standard packaging just became obsolete.

Slimbox is a brand new stationary machine to improve your logistics in a smart way. The very first in its kind. And here to stay.

A revolution in the packaging industry.

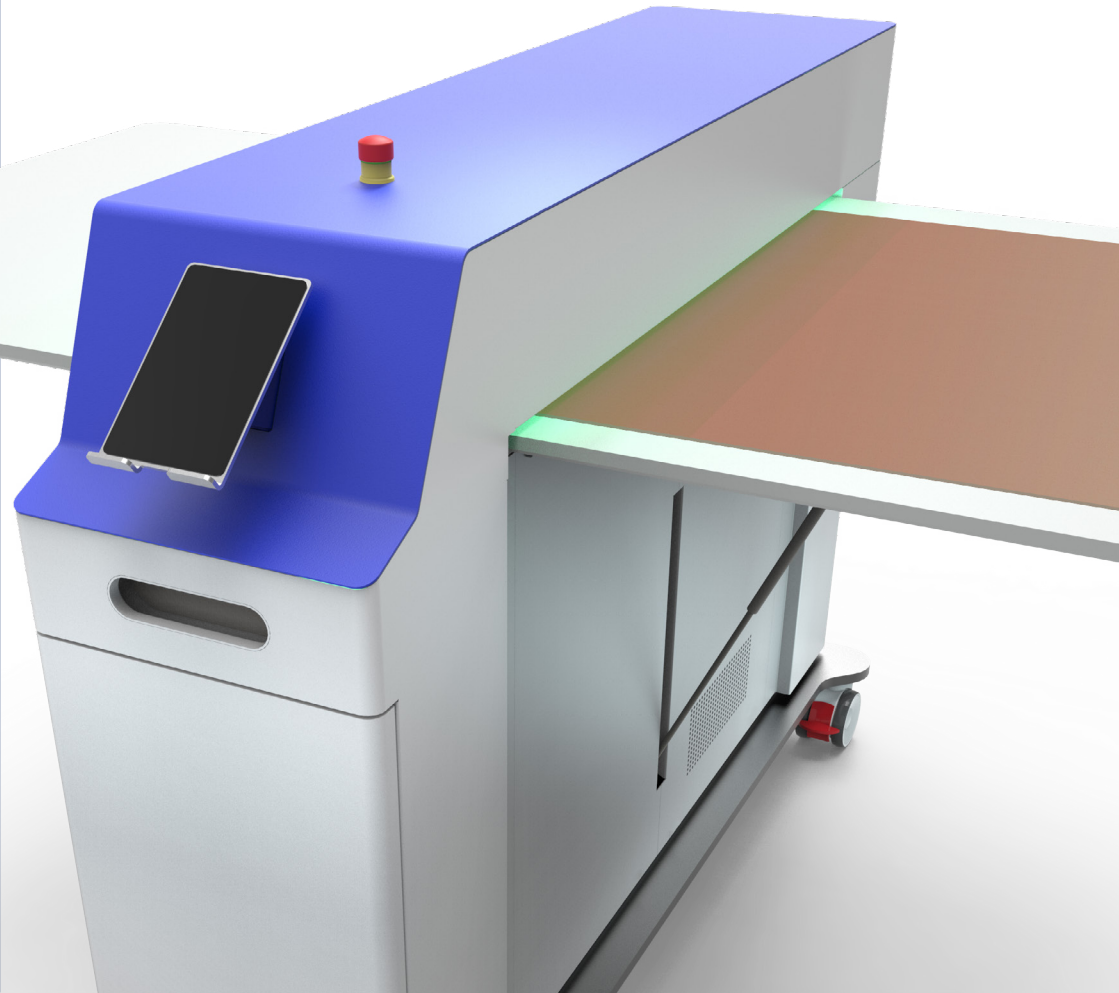

- Create your custom-made and perfect-fit cardboard boxes with Slimbox
- For every shape and all kinds of goods
- Fits smaller businesses and larger facilities

- Packing heavy goods? Just push one button in the app and cut a new box that perfectly fits around your last box. Do this again until it has the strength to hold your product.

What do we stand for?

- We want to lower your packaging and sending costs by lowering your need for filling materials and re-using leftover pieces of cardboard.
- We want to save you time. No time wasted finding the right box or keeping up with warehouse maintenance. Let Slimbox do the work for you and optimize your storage inventory.
- We want to help save the planet by implementing a zero-waste policy. We reduce your carbon emissions with at least 40% and re-use leftover material. Let's build a greener future together!
